

OPENING PDFS WITH IBOOKS

You can open PDF documents, such as a PDF attached to an email, with iBooks if you use an iPhone or iPad device:

When you view a PDF in the Safari browser tap the PDF anywhere to reveal the "Open in iBooks" option. Tap Open in iBooks to open the attachment. iBooks will open, and you can view your PDF.

When you use iBooks to open a PDF, iBooks will automatically save a copy of the PDF to your iBooks PDF shelf. That means you can view the catalog anytime **even if you do not have an internet connection**. These PDFs will sync to your iTunes Book library the next time you sync your device with iTunes.
