These instructions are intended as an outline specific to installation of the flow switch only. Refer to DEL UV-C 50 Installation Instructions & Product Manual (P/N 4-2612-01) for complete details on installation and operation.

1. Before beginning, note typical flow switch installation as shown above. (highlighted in yellow)

2. Note and mark access cover drill location above.

3. Remove access cover as described in Section 2 of the DEL UV-C 50 Manual.

4. Drill 7/8" hole in access cover, being careful not to damage internal components or wiring.

5. Locate pressure switch in the top of the DEL UV-C 50 main housing. Do not remove the pressure switch, it will remain in place.
8. Remove two wiring harness connectors from pressure switch and mate them with the new wires from the flow switch.
9. For details, see wiring diagram in Section 3 of the DEL UV-C 50 Manual. (Note “pressure switch connector” will become the “flow switch connector.”)
10. Reinstall access cover as described in Section 2 of DEL UV-C 50 Manual.

TROUBLESHOOTING
- If DEL UV-C 50 green indicator light is not on:
  - The flow switch is not active: Flow is less than 20gpm. Increase flow through the unit (for example, with a multi-speed pump you will increase pump speed)
  - The flow switch cord is not connected: Connect the cord to activate.
  - The flow switch is installed backwards: Orient the flow switch according to water flow in the direction of the arrow marking on the label of the flow switch.
- For all DEL UV-C 50 troubleshooting steps, see the Section 5 of the DEL UV-C Manual.

These instructions are intended as an outline specific to installation of the flow switch only. Refer to DEL UV-C 50 Installation Instructions & Product Manual (P/N 4-2612-01) for complete details on installation and operation.
